

**DUOLITH SD1 and CELLACTOR SC1 approved  
for wound-healing indications in the EU**

In April 2010, DUOLITH SD1 and CELLACTOR SC1 were officially approved in the EU for wound-healing indications. This further increases the versatility and economic efficiency of the medical devices.

The positive effects of extracorporeal shock wave therapy (ESWT) on healing processes have been observed for years and numerous studies have provided scientific evidence. Recently Dr. med. Danilo Jankovic and Dr. med. Ulrich Dreisilker presented their experience on the complete healing of a diabetic gangrene of the great toe with ESWT.
